

MDF CUTOUT

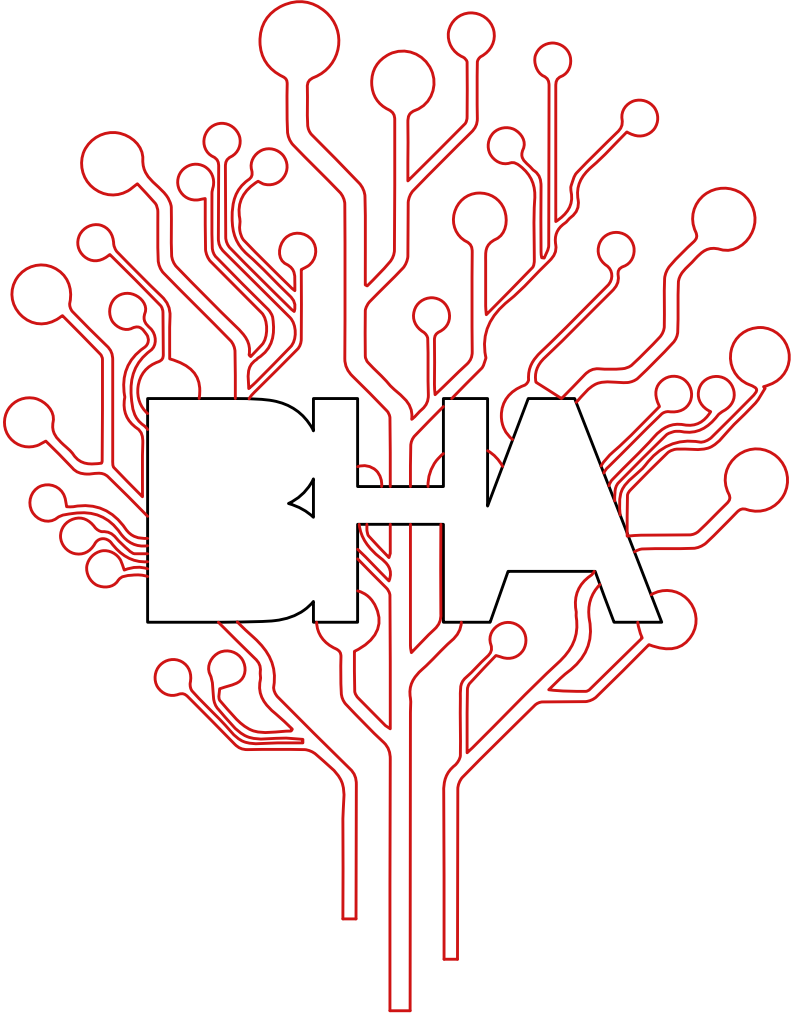

MYCELIUM MOULD

BACK PERSPEX.

It is now is the best of times. We have created a new age,
an age of universal access to the means to create our own future.
While the industrial revolution
served to mystify the tools for improving
quality of live, the maker revolution serves to demistify. Our
future is truly in your hands. You are a
Biohacker now, if you can
dream it, try it, it
just might work!

This award is presented
to Pieter Van Boheemen, founder
of the Biohack Academy.
Biohack Academy II has been another step towards the creation of
a movement to democratise science. The Biohack academy is a
project of the Waag society, an
organisation that explores and demystifies
emergent technologies, then releases them into the public domain.
